12:30-2:00	Breakout Session #2 (see below for topic descriptions) <ol style="list-style-type: none">4. Pandemic Preparedness and Response5. Climate Change6. Prevention and Equity
2:00-3:00	Report Outs, Discussion, Wrap Up

Breakout Group Topics

1. **Antimicrobial Resistance:** Addressing antimicrobial resistance in Washington through collaborative efforts, joint advocacy, training, and data sharing for improved antimicrobial stewardship and monitoring of antimicrobial resistance in humans, animal, and the environment.
2. **Data Optimization, Agency Level Data and Surveillance:** Optimizing cross-sectoral data interoperability through standardization and improved data sharing processes, ultimately developing a cross-cutting One Health data system for human, animal, and environmental health and inclusive of data from state, local, private, institutional, and tribal sectors to enable joint visualization and analysis. Conducting agency-level

data and surveillance needs assessments and advocating for optimal data and surveillance for tracking and reporting.

- 3. LHJ Community of Practice:** the community of practice (CoP) is a forum for Local Health Jurisdictions to share strategies, ideas, successes, lessons learned, and other topics related to applying the One Health approach in local public health practice.
- 4. Pandemic Preparedness and Response:** Improving outbreak/pandemic preparedness and response through joint advocacy, public engagement, data sharing, and strengthened cross-sectoral collaboration, especially for zoonotic and vector-borne diseases.
- 5. Climate Change:** Implementing a One Health approach for addressing climate impacts on health, with a focus on health equity, environmental justice, surveillance capacity, professional and public engagement, and advocacy.
- 6. Prevention and Equity:** Moving preventive work upstream using a One Health lens to promote health equity through cross-sectoral relationship building, collaboration, and advocacy.
